NO NEED TO COMPROMISE! ROYAL DECKING GIVES YOU EXCELLENCE AND AESTHETICS IN ONE!

In the past one was forced to chooses between a high maintenance natural wood deck such as Balau, and a high performance but synthetic looking composite deck.

Now, following a breakthrough in technology, Royal Decking brings you a composite deck with all its advantages but with the look of exotic wood in a variety of colors!

The development of a unique composite and an exclusive color injection technique gives each board unique color veining and texture so that it won’t look artificial. This formulation ensures each board will lighten gradually over time to a beautiful seasoned tone, giving you a natural looking deck that mimics the look of exotic hardwoods such as Ipe, Teak, Cypress and more!
ROYAL DECKING IS MORE THAN AESTHETICS, IT'S A LIFESTYLE!

The South African sun has long been the enemy of natural wood decks like Balau and others. Splintering, cracking, splitting and fading are all caused by the elements. Deck owners are forced, in a constant attempt to maintain the wood, to care for their deck several times a year. Maintenance typically includes a chemical wash, sanding and oiling, a time consuming routine requiring some skill.

Royal Decking is engineered to perform under the toughest weather conditions and will not be affected by the sun. It will never, split, crack, rot or wrap!
NO MORE SCREWS, JUST FLAWLESS SURFACES!

Another typical concern with decks is that of screws. They tend to protrude above the surface of the deck, mostly as the result of constant sanding and warping of the wood. A protruding screw is not only ugly but a hazard to children and adults’ feet alike.

Royal Decking is installed with hidden fasteners, eliminating the danger of screws giving the deck a clean flawless appearance!
